THE RIGHT TOOL FOR INDEPENDENT VERBAL PICTURE COMMUNICATION

The Right Tool for the Job - Who uses the LOGAN® PROXTALKER® communication device?

“We are so excited that the device we developed for my son Logan is being used by so many people and in so many creative ways! It is important that everybody gets the right tool for the job. With the ProxTalker we aim to enable Independent Verbal Picture Communication as easily and reliably as is possible.”

says Glen Dobbs President ProxTalker.com and designer of the LOGAN® PROXTALKER® communication device.

Since it was launched in 2009 the LOGAN® PROXTALKER® communication device has been used by people of all ages and with a wide range of abilities and disabilities to help them become independent communicators.

- Autism
- Down's Syndrome
- SLCN • Stroke • TBI
- Angelman's Syndrome
- Rett Syndrome
- ALS • CP
- Visual Impairment
- Developmental Delay

We see it used in a wide variety of settings and some unusual places

“I am really thrilled with the progress I see from my student with this system. He's building 5 word sentences, looking through his whole book and really exploring language with this vs. the PECS pics we were using. It is also SO user friendly and the parent training was smooth and unintimidating for his mother. I haven't been this excited about an AAC device, well, ever!”

Melissa, Louisville, KY

Using a wide variety of languages

- American English • British English
- Puerto Rican Spanish • Castilian Spanish
- Danish • Swedish • German

EASY - FLEXIBLE - DURABLE... How does the LOGAN® PROXTALKER® communication device work?

The LOGAN® PROXTALKER® communication device is an exciting mid-tech device which gives the user easy access to communication at the touch of a button. Compatible with any moveable picture communication system, its robust, water resistant design survives even the heaviest use. It brings sounds to pictures giving the user a voice at the touch of a button.

Just **pick** a tag, **place** it on a button and **press**, the PROXTALKER® communication device will say your recorded sound, word, sentence...

Use it as: a therapy tool • a functional communication system

- an introduction to AAC • a transition to high tech • a bilingual support
- a classroom tool • portable in a backpack • wheelchair and wall mountable

what is in the box?

- maintenance tools
- 1 year warranty

Options:

- large SoundTags™ – for visual impairment
- colored pages – for category storage
- light touch buttons – for weaker muscles
- range of languages – for versatility

Logan

How Do I Customize the SoundTags™

The secret of the success of the LOGAN® PROXTALKER® communication device is in its ease and flexibility of use. It does what it says on the label – you **pick** a tag **place** it on a button and **press** it = it speaks.

Customizing tags can be done in 2 easy steps:

1. Identify the symbol, image or cue to affix on tag -

we supply ready cut sticker sheets for both large and small tags

2. Record what you want the tag to say -

you can record up to 8 seconds of sound on each tag, a word, a sentence, lines from a play, some music...

Remember:

- The standard package will come with **80 customized tags**, pictures already matched to a sound.
- You will also have 20 blank tags, no sound no picture, to personalize for the user or class.
- A range of templates and free downloadable resources are available on the website to help you personalize tags

Here are some ways to use your ProxTalker!

Symbols

Use your favorite set of symbols Widgit, Symbolstix etc. We now distribute Communicate In Print and our online resources are currently developed with Widgit symbols. However sticker sheet templates are downloadable for CIP, Boardmaker and Word which match the tag exactly and no scissors involved.

Objects of reference

Here the object acts as a reference for the real thing 'a bottle lid for drink'

Photos

Take photos or use existing ones to make tags. An easy way to do this is using the Visual Suite software, this has templates in place so it is easy to support the user who needs photos rather than symbols

Embossed symbols

Some schools have embossing printers which raise the print on the page this can work well with some students with visual impairment. As long as a sound tag is attached you can make anything talk. An SLP once told us "the ProxTalker is only limited by your imagination" and we have seen some really creative uses of the PROXTALKER® communication device in the last couple of years. It is just fantastic!

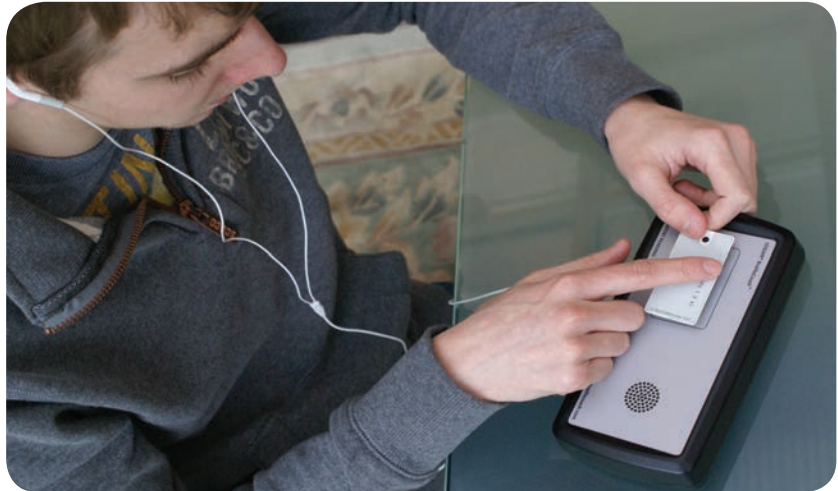

Tactile symbols

This symbol is part of the Tactile symbol set from Texas School for the blind, making the PROXTALKER® communication device accessible for students with low or no vision

LOGAN® BRAILLECOACH™

The BrailleCoach™ teaching device is a unique way to learn Braille enabling the student to work independently between lessons enhancing the progress.

Easy to use - BrailleCoach™ device comes with an alphabet set of pre-programmed Braille tags making it useable out of the box

Easy to progress - there are three modes of learning which allow progression through grade 1 and an intro to grade 2. You can introduce additional grade 2 or contracted Braille concepts through the use of a Braille labeler and blank tags.

"I have to tell you about my student who just started learning with the Logan BrailleCoach. In a week he has learned the entire alphabet, its dots, and the word associations. He is ready to practice with words and I am going to get on that next week, so grade 1 for him is essentially done in just 1 short week at 30 minutes a day" reported James a BLV educational consultant, Kansas City.

The LOGAN® BrailleCoach™ teaching device supports independent practice of Braille
